

BİRCAN ASANSÖR

www.BircanAsansor.com

İnşaat sektöründe orta ve büyük ölçekli projeler geliştirmek ve sektörün modernleşmesine katkıda bulunmak amacıyla 2015 yılında kurulan, son yenilikleri takip eden Bircan Asansör, profesyonel nitelikleri sayesinde istikrarlı bir büyüme göstererek pazarda kendine yer edinmiştir.

Sektörün gelişimini ve yeni pazar taleplerini takip eden Bircan Asansör, güçlü idari ve mali altyapısı sayesinde sektörün önde gelen şirketlerinden biri olmaya devam ediyor.

Taahhütlerini zamanında yerine getirerek sektörde güçlü bir itibar kazanan Bircan Asansör'ün başarılarında, çalışanlarının deneyimi ve profesyonelliğinin yanı sıra yönetim ekibinin strateji ve organizasyonel başarısı da önemli rol oynamıştır. biçim.

23 yılı aşkın inşaat geçmişinde yüzlerce asansör inşa eden Bircan Asansör, asansör inşaatı ve montajı alanında faaliyetlerine başladı. Yapısal ve organizasyonel bilgi ve becerilerini asansör alanına aktaran Bircan Asansör, asansör sektöründeki güçlü firmalarla işbirliği yapmaktadır.

Having been founded in 2015 with the aim of developing medium and large-scale projects in the construction sector and contributing to the modernization of the sector by following the latest innovations, Bircan Asansör has established a reputation in the market by showing a steady growth with its professionalism, creativity, decency.

By following the developments in the sector and the new demands in the market, Bircan Asansör continues to be one of the leading companies in the sector with its strong administrative and financial background.

The experience and professionalism of its personnel, as well as the strategy and organizational success of the management team, have been influential in the achievement of Bircan Asansör, which has achieved a serious reputation in the sector by completing the commitments it has undertaken on time and above the expected quality levels.

Having built hundreds of elevators in its construction history of over 23 years, Bircan Asansör Construction started its activities in the field of elevator construction and installation. Transferring its structural and organizational knowledge and skills to the elevator field, Bircan Asansör cooperates with strong companies in the elevator sector.

Dünyadaki tüm makineler insanların işini kolaylaştırmak, hayatlarını kolaylaştırmak ve konfor sağlamak amacıyla üretilmektedir. Her makinenin sağlıklı, dayanıklı ve güvenli bir şekilde çalışabilmesi için bakım ve takiplerinin periyodik olarak, üreticinin belirleyeceği aralıklarla uzmanlar tarafından yapılması gerekmektedir.

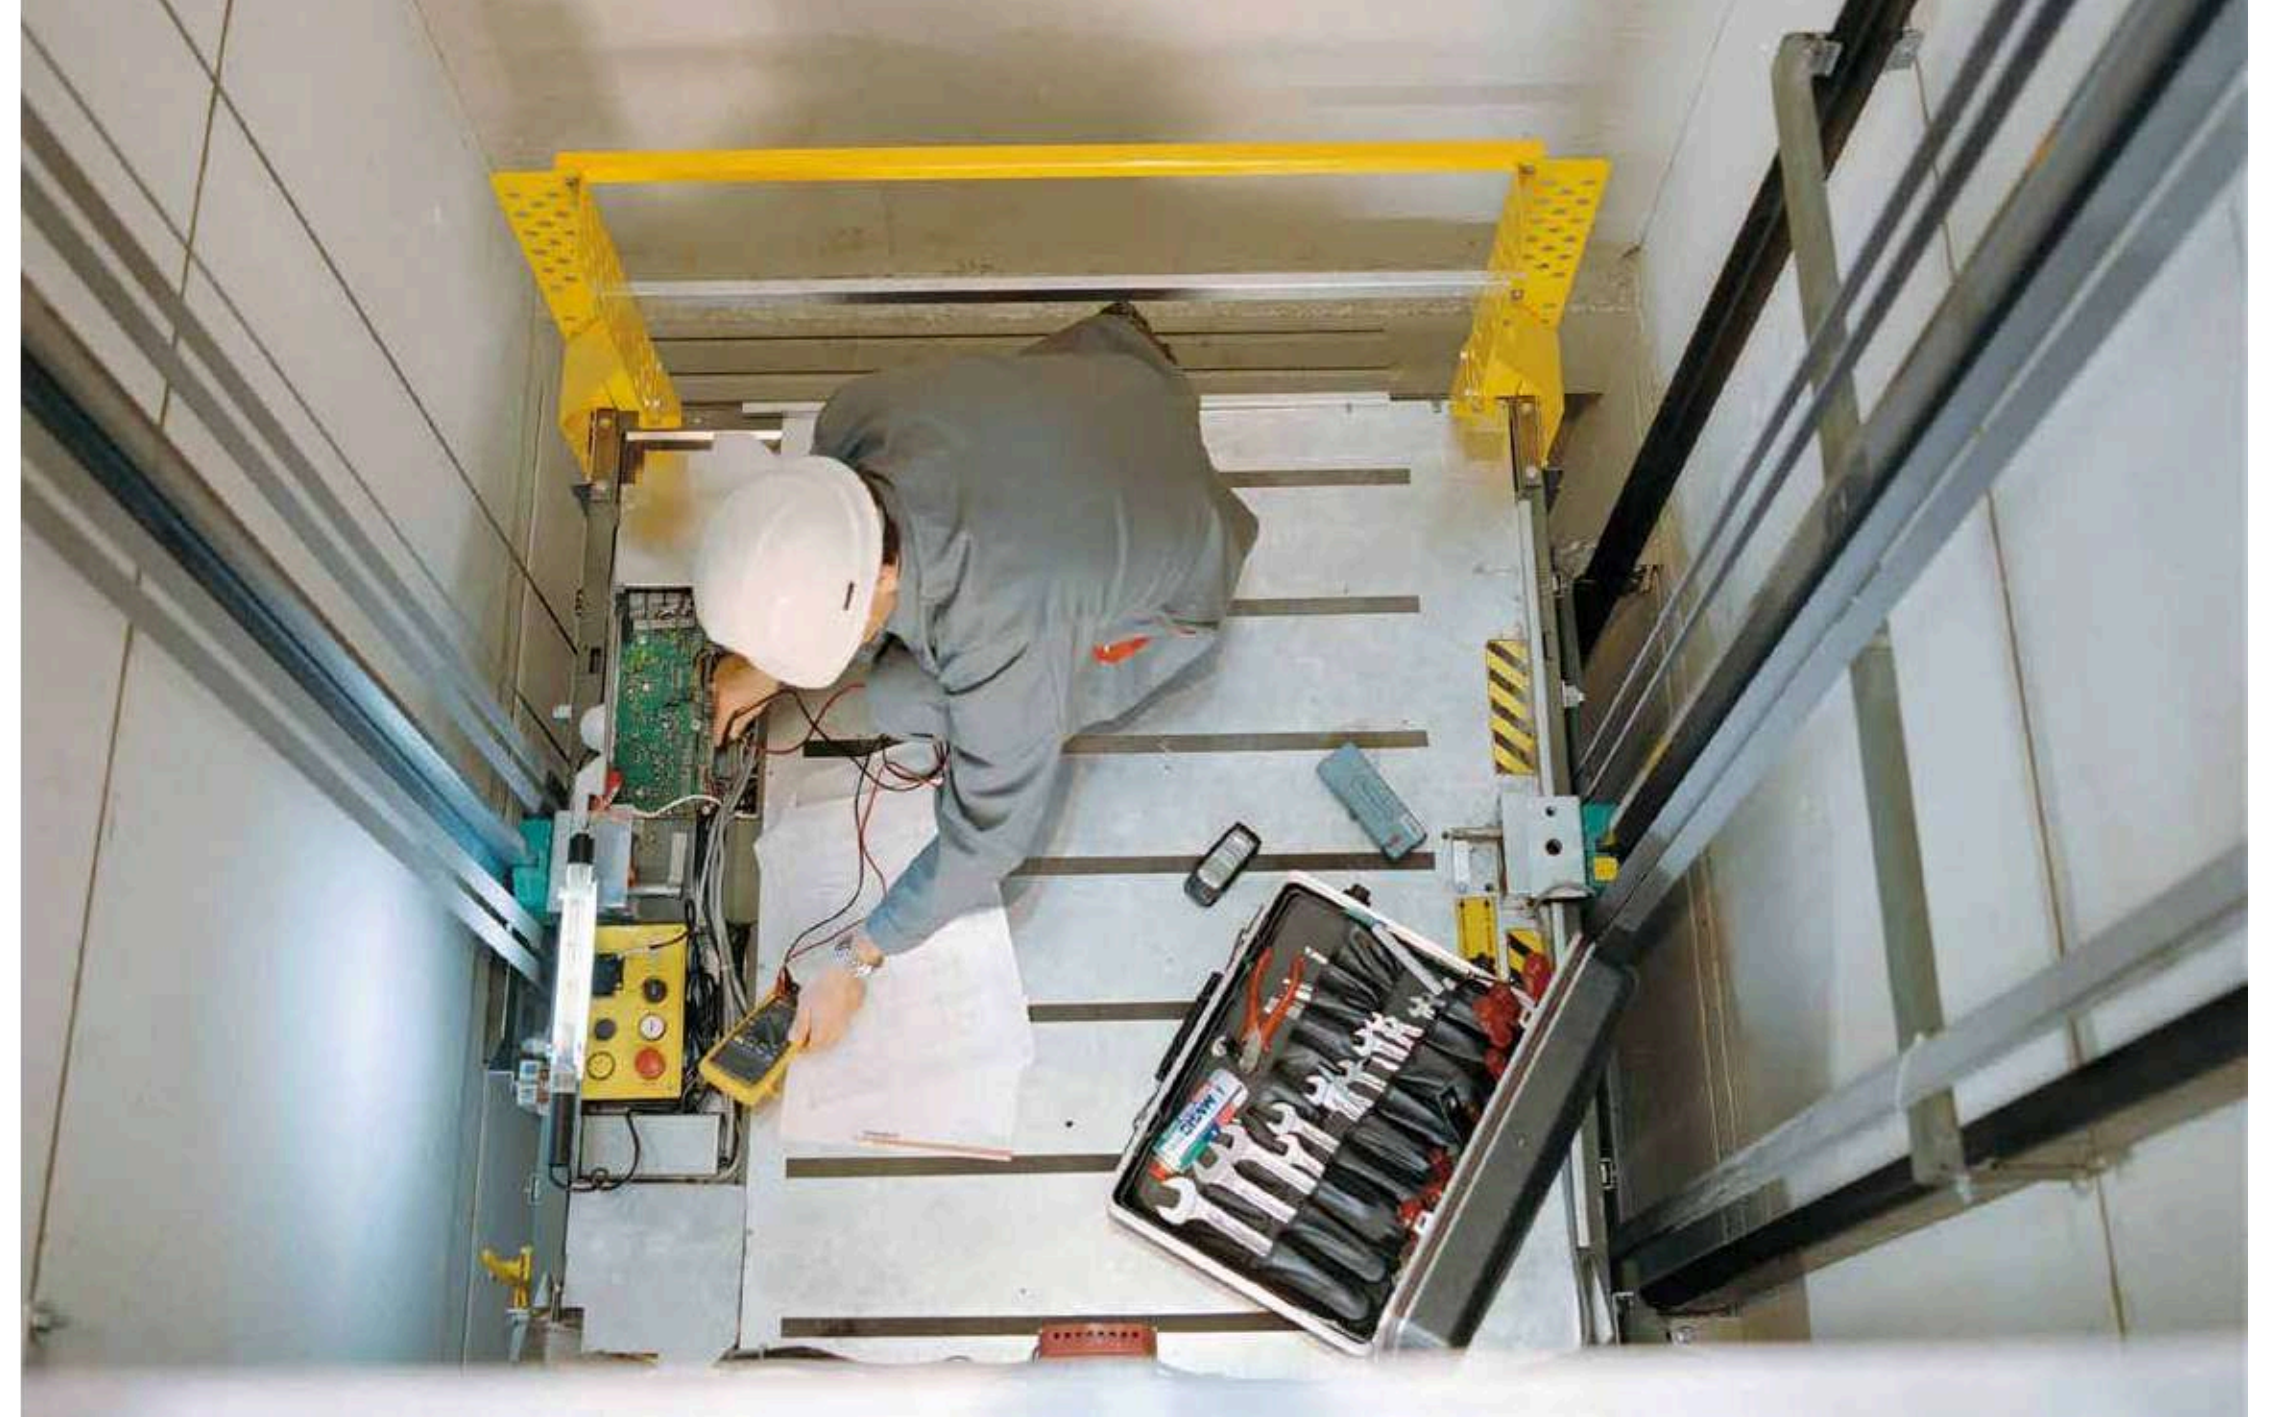

Asansör de aynı amaca hizmet eden bir ulaşım aracıdır. Mal taşımak için kullanıldığı için genellikle İNSANLARI taşır. Bu nedenle son derece güvenli ve son derece güvenilir olması gerekir. Asansörün kalitesi ne olursa olsun bakımının ve periyodik muayenelerinin büyük bir hassasiyetle ve sürekli olarak yapılması gerekmektedir.

Deneyimli, yetkin ve bilgili ekipler tarafından gerçekleştirilen asansör bakımı, insanların sağlığını ve konforunu güvence altına alırken, periyodik muayeneler sonucunda çok az tazminatla büyük maddi kayıpların da önüne geçmektedir.

All the machines in the world are produced in order to alleviate the workforce of people, to facilitate their lives and to ensure comfort. In order for each machine to be working properly, durable and safe, maintenance and control must be carried out by experts periodically at the intervals determined by the manufacturer.

Elevator is a travel tool that serves the same purpose. It usually carries PEOPLE as it is used for carrying load. For this reason, it has to be extremely safe and extremely reliable. Regardless of the quality of the elevator, its maintenance and periodic controls should be done with great precision continuously.

Elevator maintenance, carried out by experienced, competent and aware teams, ensures the health and comfort of people, as well as the prevention of major financial losses with small compensations as a result of periodic controls.

Asansörlerde zamanla yıpranan malzemelerin değiştirilmesi veya kabin kaplamalarının revizyonu gerekebilir. Bu değişiklik teknik zorunluluktan kaynaklanabileceği gibi, yeni teknolojilerin kullanılması amacıyla yapılabileceği gibi tamamen estetik nedenlerle de yapılabilir.

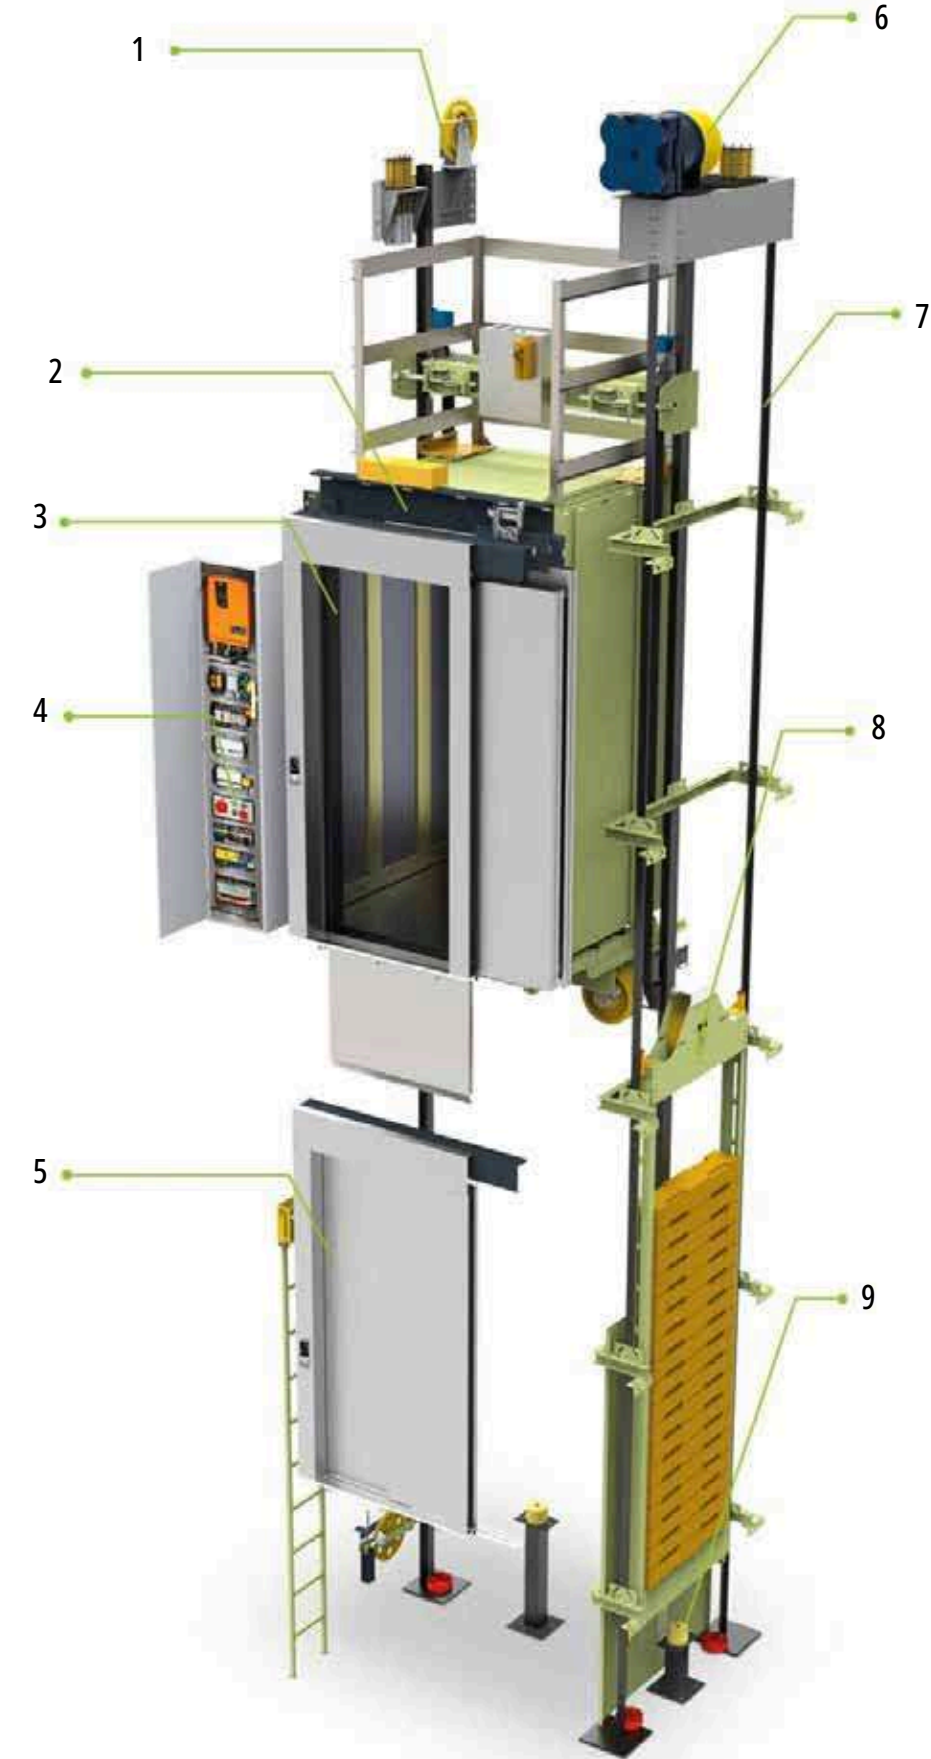

Asansörlerin iç kısımlarında sürtünme veya aşınma ve yıpranma nedeniyle bazı parçalar zamanla bozulur. Bu durum bazen hasarlı parçanın diğer parçaları etkilemesi ile sonuçlanabilmekte ve uzman müdahalesi gerekebilmektedir.

Eski asansörlerde sistemin daha verimli çalışması için asansörün tamamının değiştirilmesine gerek kalmadan bazı aksamalarda değişiklik yapılarak çözüm bulunur. Bu süreçte eski parçalar yenileriyle değiştirilir. Modernizasyonun güzel uygulaması mimari, estetik ve teknolojinin senkronizasyonudur.

In elevators, it may be necessary to change the materials that wear out over time or to revise the decoration of the cabinet. This revision may be due to a technical necessity, or it may be done for the purpose of applying new technologies as well as purely aesthetics reasons.

Some parts become unusable over time due to friction or wear on the internal parts of the elevators. This situation can sometimes cause the damaged part to affect other parts and it may become necessary to be interfered by experts.

In old elevators, in order for the system to work more efficiently, a solution is found by revision of some components without the need to change the entire elevator. In this process, old parts are replaced with new ones. A beautiful modernization practice is when architecture, aesthetics and technology are synchronized.

MRL System

it is possible to intervene in the entire system via a door opening to the well. With the usage of Gearless machines there is no more a necessity for machine rooms. With our frequency-controlled machine, comfort in take-offs and stops and sensitivity in floor settings have reached the maximum. In addition to energy savings of up to 40% compared to conventional motors, wear is extremely low due to the absence of a gearbox. The fact that the system is completely oil-free there is no environmental pollution and risk of fire

MRL Sistemi

Kuyuya açılan bir kapı sayesinde tüm sisteme müdahale etmek mümkündür. Dişlisiz makineler kullanıldığında makine dairesine ihtiyaç duyulmaz. Frekans kontrollü makinemiz sayesinde hareket etme ve durma konforunun yanı sıra zemin ayarlarında hassasiyet maksimuma çıkarılmıştır. Geleneksel motorlara göre %40'a varan enerji tasarrufunun yanı sıra, dişli kutusu olmadığından aşınma son derece düşüktür. Sistemin tamamen yağsız olması çevre kirliliğine ve yangın riskine yol açmaz.

MR System

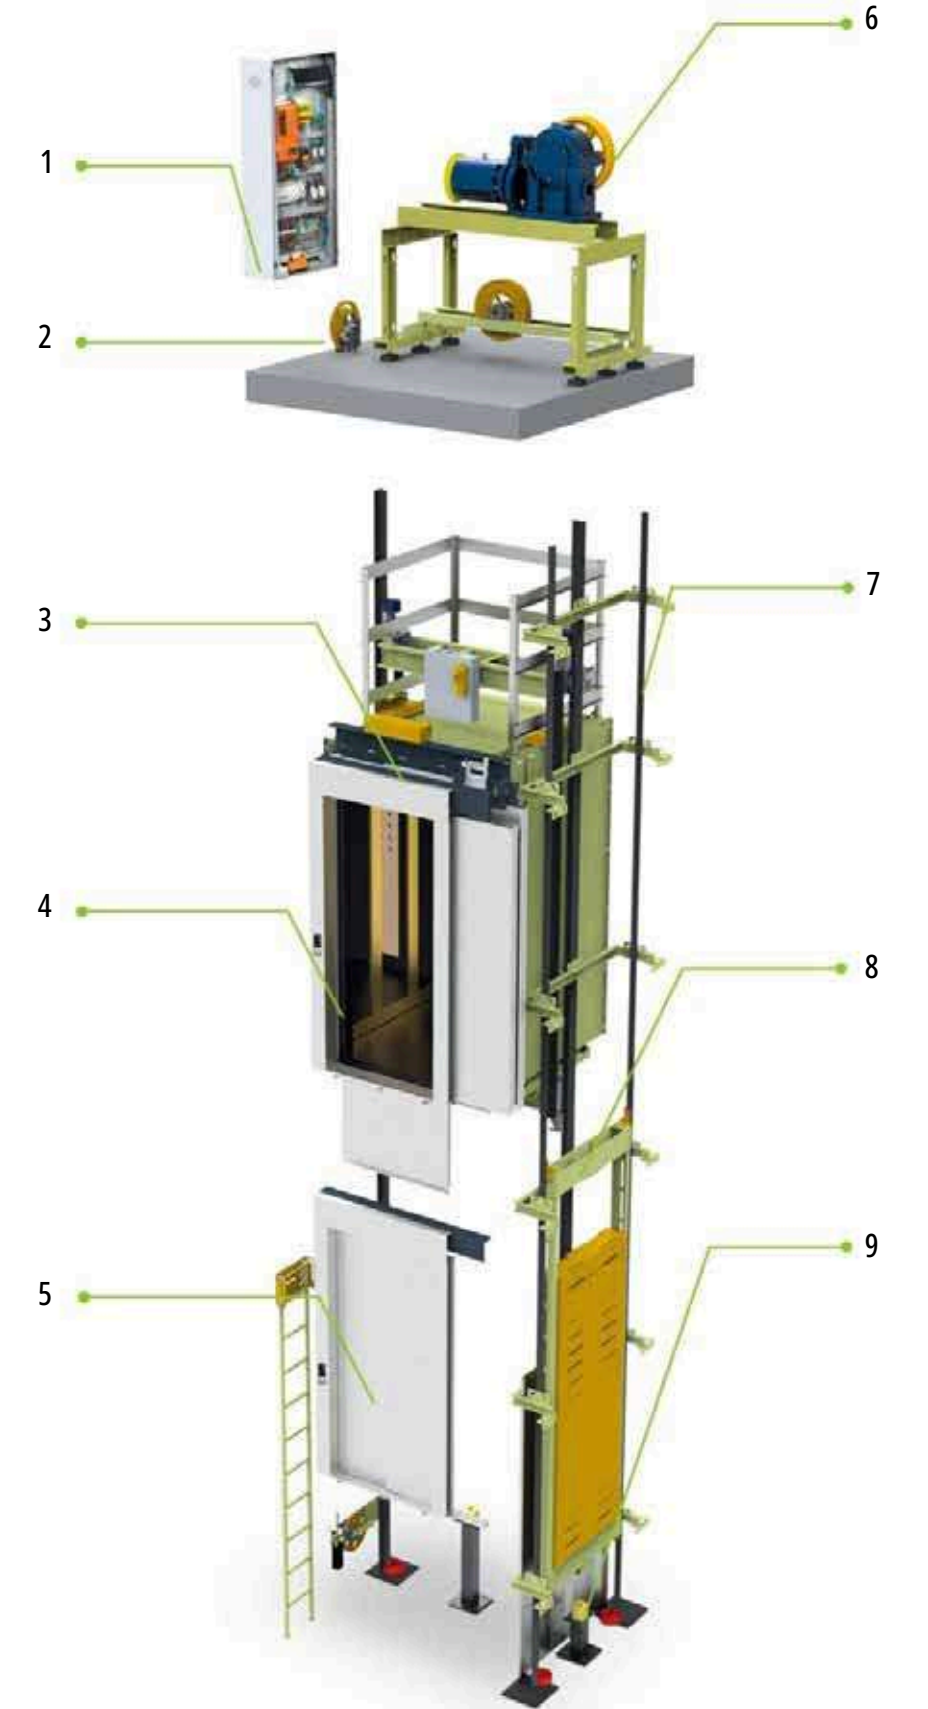

Apart from the elevator shaft, there is also a machine room. It is possible to intervene in the whole system through a door to the engine room. Both Gearless and geared machines are used in elevators that have machine rooms. With our frequency-controlled machine, comfort in take-offs and stops and sensitivity in floor settings have reached the maximum. It provides energy savings of up to 40% compared to conventional motors. Oil maintenance should be done periodically when geared motor is used.

Otopark çağımızın en önemli sorunlarından biridir. Platform asansörleri, çok katlı otoparklarda ve özel mülklerde peyzajı ve estetiği bozmadan rahat park etme olanağı sağlar veya bir otoparkta iki araç yerleştirmenize olanak sağlar.

Parking lot is one of the major problems of the day. Platform elevators provide the convenience of parking garages in multi-storey car park systems and private properties without disturbing the landscape and aesthetics, or to put two vehicles in a one-car area.

Hydraulic System

Lifting work is carried out by means of an electrically driven pump that delivers hydraulic fluid to a lifter that directly or indirectly affects the cabin. In these elevators, the downward movement is realized by the weight of the cabin. In hydraulic elevators, the engine room is generally located at the first stop level. There is an oil boiler and hydraulic machine (assembly), control panel and hoses through which the hydraulic fluid passes. Inside the elevator shaft the components are: cabin, counterweight (if any), cylinder- piston system, suspension device and buffers.

The pumped oil passes through the hydraulic machine, fulfilling certain conditions, and activates the cylinder through the pipes. The cylinder can be directly or indirectly connected to the cabinet. The cabin pushed by the cylinder is moved to the required floor with the received control.

HİDROLİK SİSTEM

Kaldırma işi, doğrudan veya dolaylı olarak kabine etki ederek asansöre hidrolik sıvı sağlayan elektrikle çalışan bir pompa kullanılarak gerçekleştirilir. Bu asansörlerde aşağı doğru hareket kabinin ağırlığı ile gerçekleştirilir. Hidrolik asansörlerde makine dairesi genellikle ilk durak seviyesinde bulunur. Bir yağ kazanı ve bir hidrolik makine (monte edilmiş), bir kontrol paneli ve içinden hidrolik sıvının geçtiği hortumlar bulunmaktadır. Asansör boşluğunun içinde: bir kabin, bir karşı ağırlık (varsa), bir silindir-piston sistemi, bir süspansiyon cihazı ve tamponlar bulunmaktadır.

Pompalanan yağ, belirli koşulları yerine getirerek hidrolik makineden geçer ve boru hatları aracılığıyla silindiri çalıştırır. Silindir kabine doğrudan veya dolaylı olarak bağlanabilir. Silindir tarafından itilen kabin, ortaya çıkan kontrol ile istenilen kata hareket eder.

Ev asansörleri, inşaat veya küçük tadilatlar sırasında mevcut binalara kolayca entegre edilebilen eksiksiz bir asansör paketidir. Tasarımı, geniş renk ve malzeme seçeneği sayesinde her proje mimari yapının statik yapısına ve tarzına uygun olarak gerçekleştirilmektedir. Tasarım esaslı çalıştığı için her türlü ölçü ve kapsam seçeneği değerlendirilmektedir.

Home elevators are an all-inclusive elevator complex that is easy to integrate during construction or with minor renovations to existing buildings. With our design, wide color and material options, each project is carried out in accordance with the static and style of architectural structure. Since it works on a project basis, all kinds of size and coating options are evaluated.

Sedye asansörleri olarak da bilinen hastane asansörleri, sedye üzerinde yatan hastaların taşınması için tasarlanmıştır. Sedyeler-liftler hastaların daha rahat ve güvenli taşınması için özel çalışma gerektirir. Sedyelerin kaldırma hızı çok hızlı değil, kabinler antibakteriyel tasarıma sahip, kabin içi aydınlatmalar hastaları rahatsız etmeyecek seviyede, kapılar daha geniş ve tuşlara ulaşım daha kolay.

Hospital elevators, also known as stretcher elevators, are designed for the transport of patients lying on a stretcher. Stretcher elevators require special work for more comfortable and safe transportation of patients. The speed of the stretcher elevators is not too high, the cabins are designed antibacterial, the cabin lighting is at a level that will not disturb the patients, the doors are wider and the buttons are easier to reach.

Servis asansörleri, 50 ile 300 kg arasında değişen yükleri taşımak üzere tasarlanmış küçük yük asansörleridir. Servis asansörleri restoran, kütüphane, villa, hastane ve ofislerde kullanılmaktadır. Restoranlarda yaygın olarak yemek ve tabak taşımak amacıyla kullanıldığından hijyenik koşullar büyük önem taşımaktadır. Kabin içi paslanmaz çelik ve antibakteriyel malzemeden yapılmıştır.

Service elevators are small freight elevators designed to carry loads between 50 and 300 kg. Service elevators are used in restaurants, libraries, villas, hospitals and offices. Since it is generally used to carry food and plates in restaurants, hygienic conditions are of main importance. The cabin interior is made of stainless steel and antibacterial material.

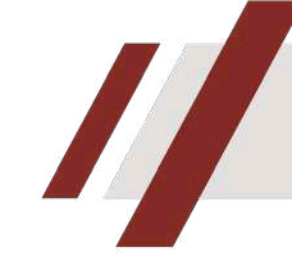

Engelli asansörleri, merdiven çıkamayan kişilerin bu engelleri rahatlıkla aşabileceği şekilde tasarlanmıştır.

Engelli asansörleri, merdiven kenarına takılan bir mekanizma veya platform olarak engelli bireylerin hem çıkış hem de iniş sırasında konforunu sağlar. Engelli asansörü veya merdiven asansörü olarak da bilinen bu asansör modeli villa, ev ve iş yerlerinde yaygın olarak kullanılmaktadır.

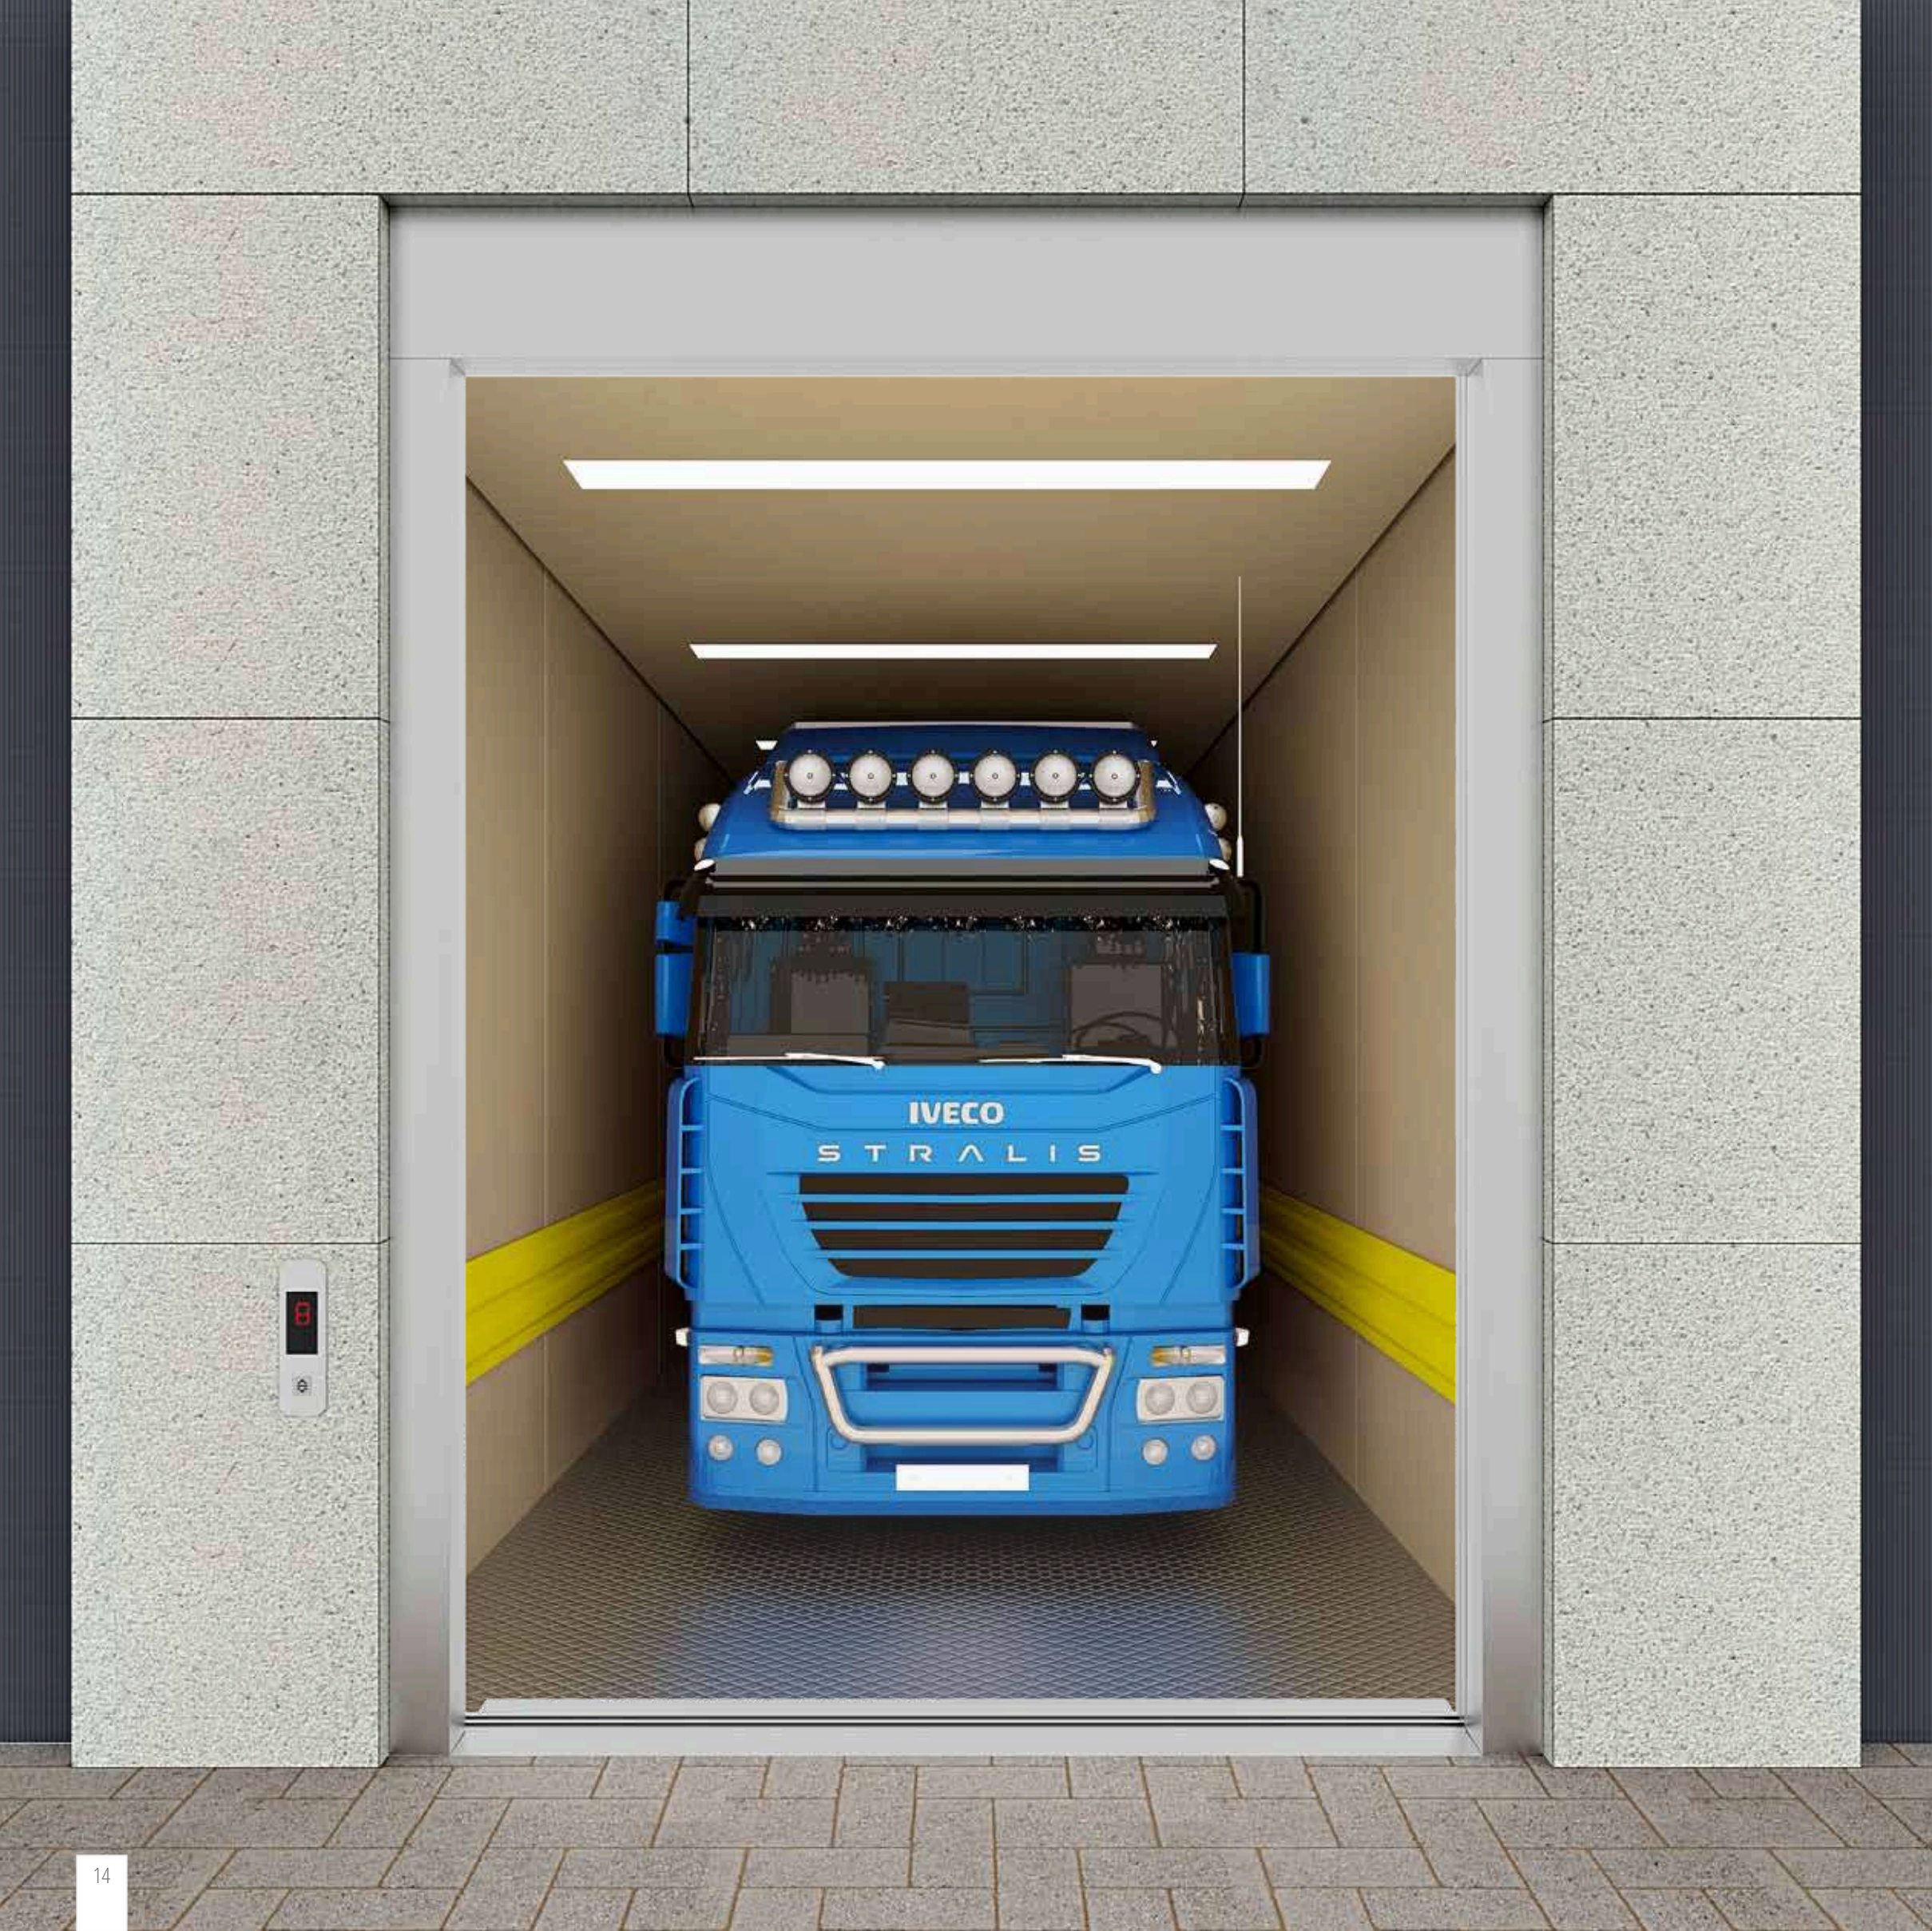

Disabled elevators are designed so that people who are not able to climb stairs or heights can easily overcome these obstacles.

In disabled lifts, comfort is provided for disabled people both ascending and descending direction via a mechanism that is attached to the side of the stairs or as a platform. This elevator model, also known as a handicapped elevator or a stairlift, is generally used in villas, homes and workplaces.

ARAÇ ASANSÖRÜ

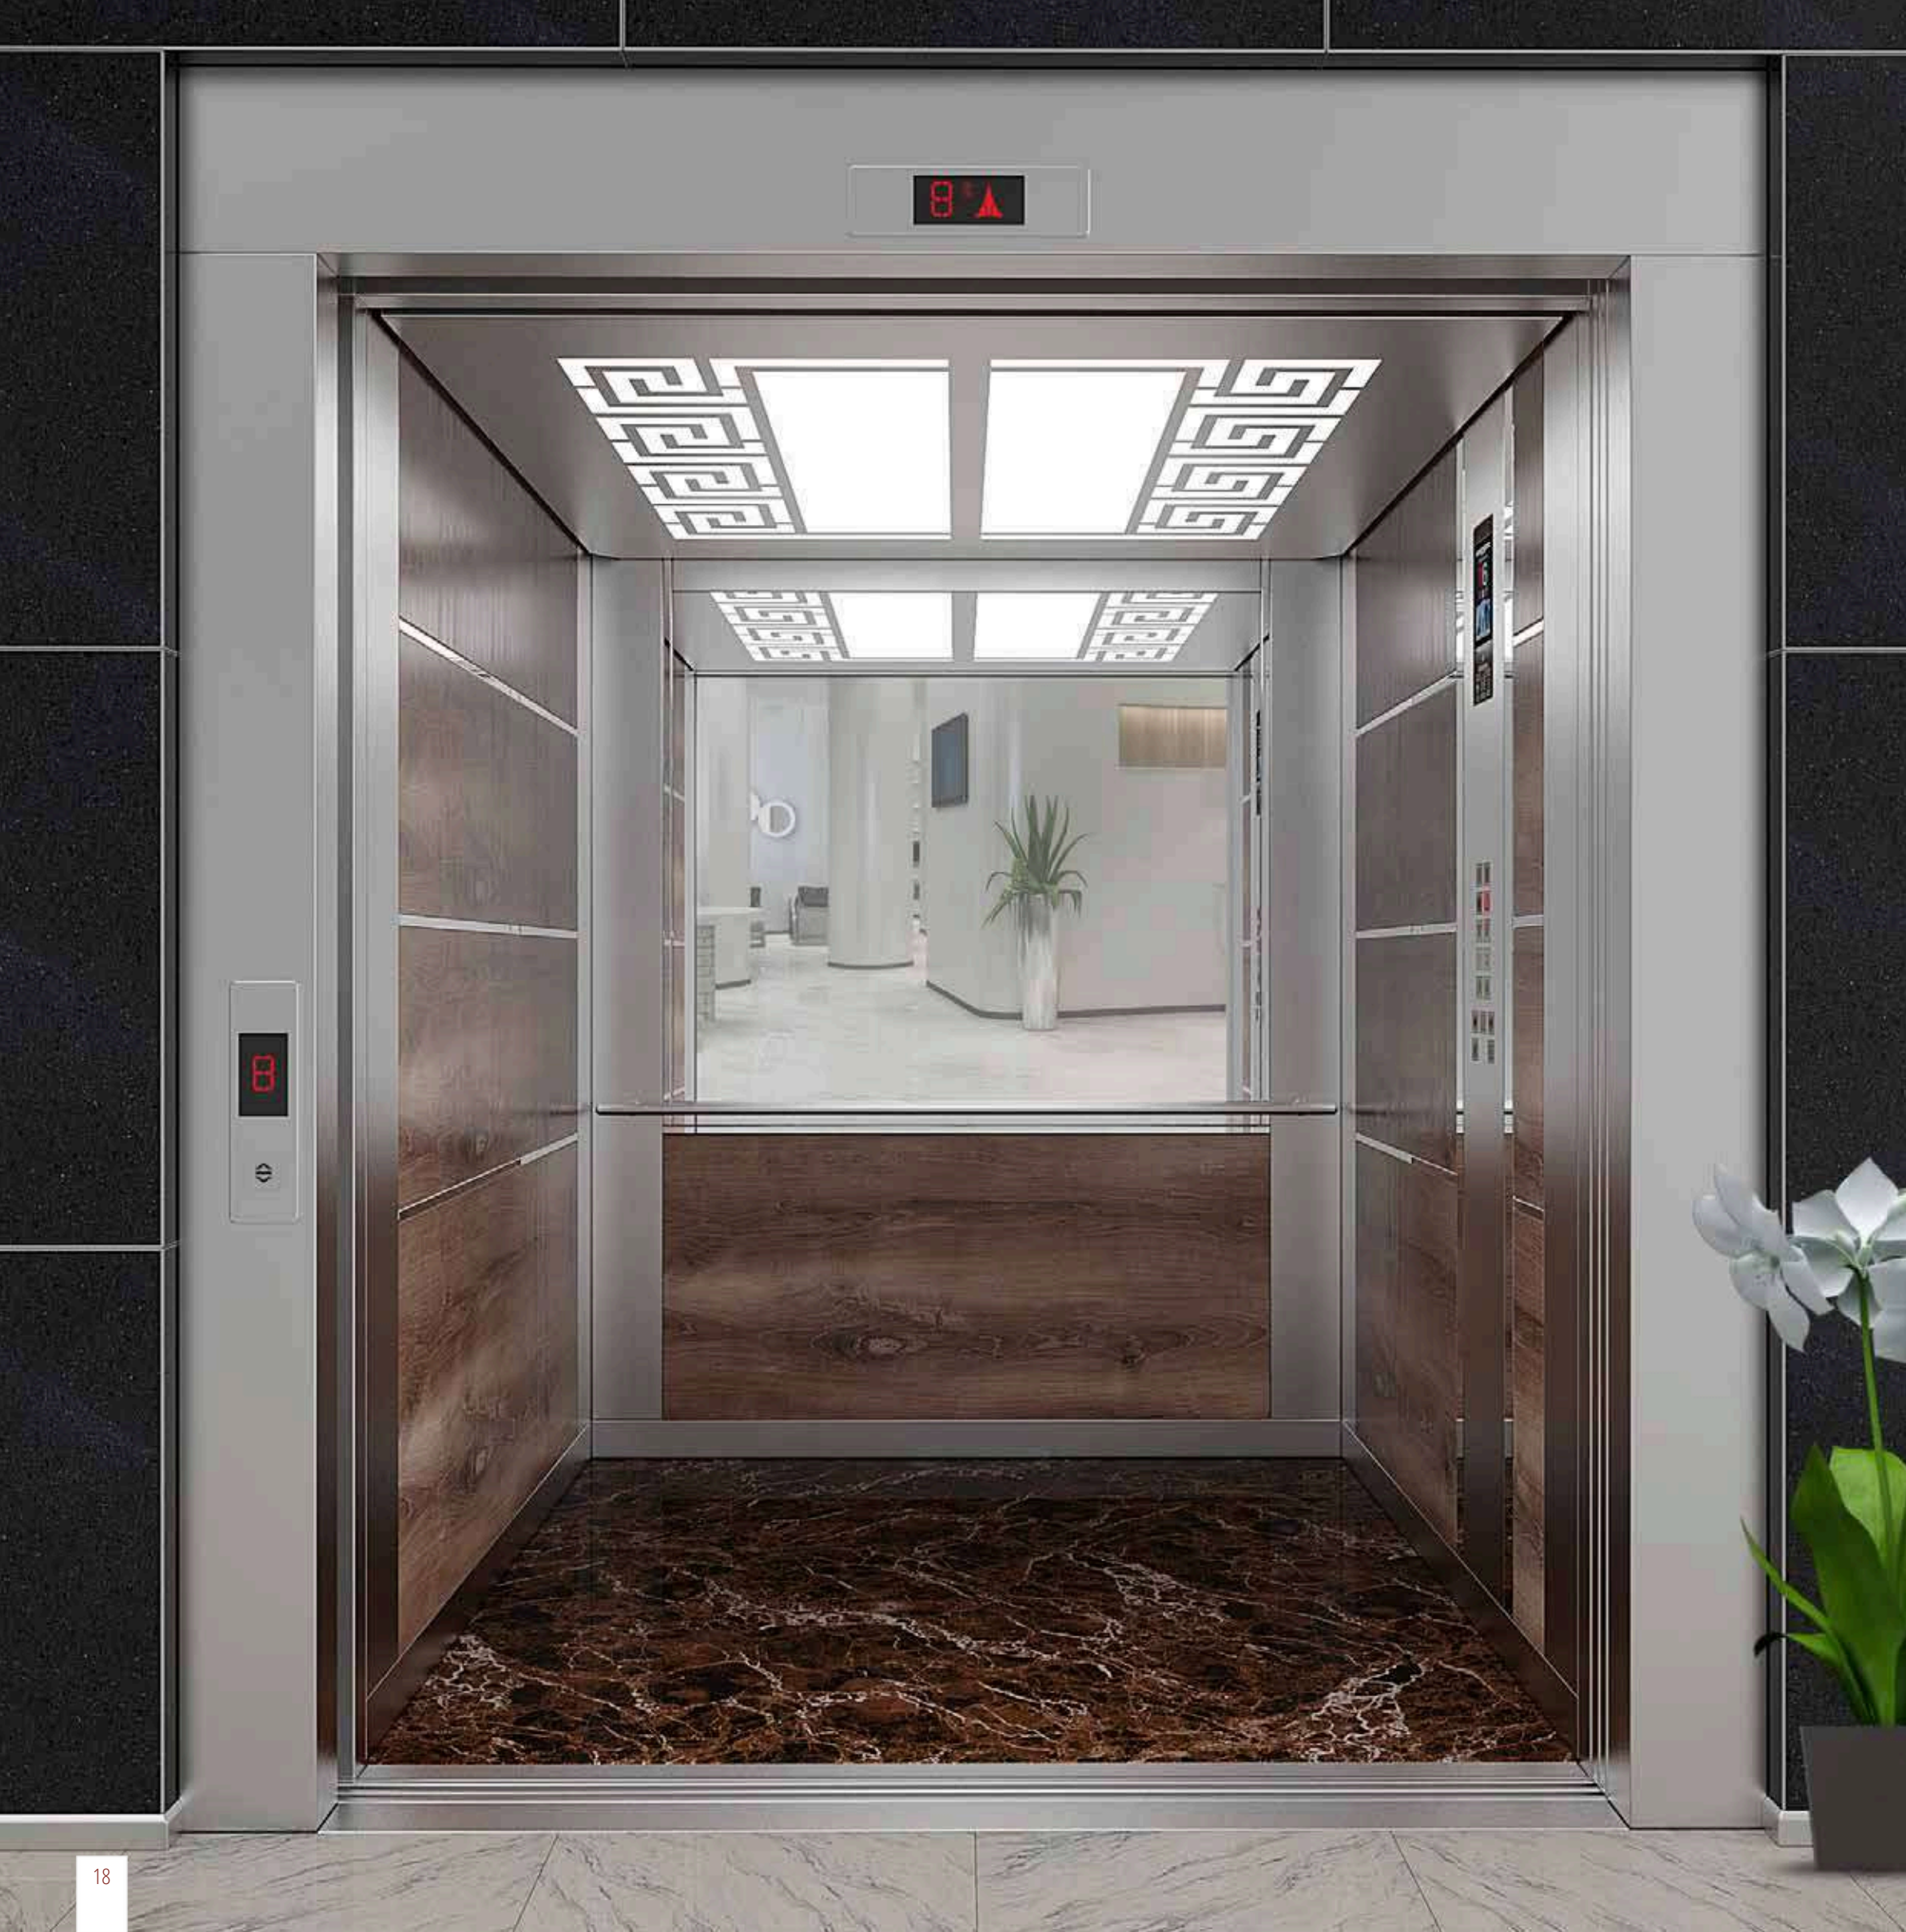

VEHICLE ELEVATOR

Araba asansörleri sanayi başta olmak üzere otomotiv, lojistik ve katlı otoparklarda yaygın olarak kullanılmaktadır. Ağır yüklere hızlı tepki vermesinin yanı sıra yüksek enerji tasarrufu da sağlar. Hidrolik ünite sistemiyle çalışan araba asansörleri 10.000 kg'a kadar kaldırma kapasitesine sahip olarak tasarlanabilmektedir.

Vehicle elevators are widely used in the automotive, logistics and multi-storey car park sectors, especially responding to industrial needs. It not only responds quickly to heavy loads, but also offers high energy savings. Vehicle lifts working with hydraulic unit system can be designed up to 10000kg capacity.
